Nathan (Nate) Smith

Business Systems Analyst | Integrations and Automation
Central Florida | ntsmth7@gmail.com | 407-726-0295

Professional Summary

I'm a Business Systems Analyst experienced in translating stakeholder needs into practical solutions, integrating software systems, and automating workflows. I'm skilled in administering business applications across various industry environments including hospitality, commercial construction, and technology. I excel at combining business analysis across all departments with automated solutions to improve workflows on any scale. I also enjoy general IT problem solving.

Core Skills

Business Analysis: Requirements Gathering, Stakeholder Interviews, Process Mapping, Gap Analysis, User Acceptance Testing, Business Requirements Documents, Prioritization, and Post Implementation Review

Integrations and Automation: Cross platform integrations, REST APIs, webhooks, automating workflows, data mapping, and form driven process automation (Jotform, Google Forms)

Systems Administration: Google Workspace, ClickUp, Copper CRM, User Provisioning, Access Management, Onboarding and Offboarding, IT Support, Cybersecurity Training

Release and Change Management: Release Documentation, End User Training, Change Management, Loom video walkthroughs, Knowledge Base Management, Learning Management System course creation

Additional Tools: QuickBooks Online, Paylocity, RingCentral, GoTo Connect, Kojo, Salesforce

Professional Experience

Business Analyst and Software Release Coordinator

Kalos Services, Central Florida | March 2025 to July 2026

Business Analysis

- Ran structured discovery with stakeholders across various departments, weighing each request by business need, financial impact, and effort prior to scoping.
- Developed business requirements documentation, secured stakeholder sign off, and handed developers clear specifications before development began.
- Followed up on regular cadences after each release, updated documentation for bugs and enhancements, and reported impact to leadership as percentage improvements.
- Redesigned the company credit card receipt approval process: audited every cardholder's transaction history, mapped current and target workflows, and designed the approval form and routing into accounting.

Integrations and Automation

- Delivered 10+ cross platform integrations and workflow automations using APIs.
- Made the case for, scoped, and validated an n8n connector to the company's proprietary field service platform, opening it to third party integrations it did not support natively.
- Mapped service opportunities from ClickUp into Copper CRM and linked construction project tasks to their sales opportunity tasks, so sales and operations work from one pipeline.
- Built JotForm and native forms, including preventative maintenance and technician request forms tied to existing tracking spreadsheets, integrated with downstream systems so collected data flows into the correct tools.

Systems Administration

- Administered Google Workspace, ClickUp, and Copper CRM, covering onboarding, offboarding, access changes, configuration, spaces, dashboards, and reporting, and supported Make.com, JotForm, and general IT requests and troubleshooting.

Release Enablement and Training

- Delivered 50+ projects and releases, running user acceptance testing and demos before each reached production.
- Met with the development lead before each launch, then trained staff by live demo, Loom video, or written guide, whichever fit the change.
- Authored sprint release documentation for every sprint, a reusable launch documentation template, and phased iOS and Android rollout instructions for the mobile platform.
- Built 'how to' training for Google Gemini, Drive, and Calendar, and created cybersecurity awareness content for the company Learning Management System.

Project and Vendor Coordination

- Led the Copper CRM evaluation and Phase 1 rollout, from vendor comparison through pipeline configuration and user onboarding.
- Led the implementation of the Kojo procurement platform, coordinating business stakeholders and the vendor.
- Led the procurement, negotiation and switch from 'GoTo' to 'RingCentral' for our internal and customer facing phone system, cutting phone related support tickets by nearly half.

IT Specialist

Evermore Orlando Resort, Orlando, Florida | January 2022 to March 2025

- Provided onsite and remote IT support for employees, clients, and guests across a 1,000 acre resort, minimizing downtime for staff and guests.
- Administered software applications and sped up user account creation through the Google Workspace Administration Console, so new employees had access in place when they started.
- Created and maintained databases for employee records and inventory, giving the resort a consistent source of truth.
- Coordinated third party vendors on projects such as building out new office spaces and implementing IT systems, so new spaces and systems were ready for staff to use as the business scaled.
- Trained employees on IT best practices and ensured cybersecurity compliance across all users property wide, reducing security risk.
- Wrote SOP documentation and taught resort guests how to use in room technology, reducing repeat support requests.

Customer Service Supervisor

Dell Technologies | November 2020 to January 2022

- Led Level 2 customer support operations, resolving escalated issues and complex conflicts and maintaining a 96% satisfaction rating across the team.
- Prioritized client communications and redirected issues to the right teams for timely, accurate resolution.
- Coached team members through regular performance evaluations focused on skill development, goals, and client satisfaction.
- Used Avaya and Salesforce Lightning to monitor agent KPIs and track customer interactions, and analyzed customer feedback to find trends and identify areas for improvement.
